EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Att. Slobasky on July 8, 2004.

The application has been amended as follows:

In the specification

Page 5, line 5, before "technical", delete – said --.

Page 7, line 1, before "technical", delete – said --.

Page 8,

line 3, before "interface", delete – said --;

after line 4, insert a paragraph:

"Fig. 1 a schematic presentation of the prior art isolation interface using a capacitive coupling.

Fig. 2 the time development of various signals for the isolation interfaces of Fig. 1."

line 13, and before "replicas", delete – said --.

In the claim

In claims 1-7, replace "that" and/or "and that" (each occurrence) with – that –; and – and that – (without underlined each occurrence).

Art Unit: 2816

In claim 5, line 7, before "signal", delete – the --.

In the drawings

The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

Figs. 1-2 are labeled as "Prior Art".

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to an isolation interface with a capacitive barrier utilizing in input circuit, first – second barriers capacitors, first and second logical output signals, an output circuit, first and second logical input signals, first and second voltage comparators, first and second integrating units, first and second resistors, first and second differentiating units, a pulse width modulator and an auxiliary communication channel recited in claims 1-7. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: "the input circuit (A1) a first integrating unit (R1, C1)+ and a second integrating unit (R1, C1)- are provided ... are shorter than the rising and falling-off times of the logical output signals U1o+ and U1o- being the replicas of the transmitted input signal Ui" (line 13- last line) as recited in claim 1; the combination of all the method steps as recited in claim 5.

The prior art reference submitted by the applicant on IDS form received on 01/07/04 was reviewed and considered. This reference (U.S Patent No. 4,835,486)

Art Unit: 2816

appears to be the best reference with respect to the claimed invention and closely matched the reference found during the examiner's searches. However, as noted above, the combination of all limitation the claim is not disclosed. Therefore, the claims are patentably distinct over all these prior art references of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
